Draw Arduino Logo with MKR Vidor 4000

Draw the Arduino Logo on an HDMI monitor, using the MKR Vidor 4000 board.

Author • Arduino Last revision • 06/03/2022

This example uses the drawing functions of the VidorGFX library to recreate on screen our beloved logo, in a stylized form. The functions available for the graphics generation are the same of the [Adafruit_GFX library](#).

Hardware Required

Arduino MKR Vidor 4000

microHDMI to HDMI cable
or adaptor

Monitor with HDMI input

Circuit

There is no circuit for this example.

[Help](#)

The circuit for this tutorial.

Code

Include the Vidor_GFX library, which is part of VidorGraphics.

```
#include  
"VidorGraphics.h"  
  
#include "Vidor_GFX.h"
```

To manage graphics on screen you need to create an object with `Vidor_GFX vdgfx;` then all the functions will refer to that object. In our example we draw circles, rectangles and lines, with some added text. The screen resolution used for this example is 640 x 480 pixels and all the primitives are used with this coordinate system as reference.

The complete sketch is below and you find it in the examples from Libraries, under VidorGraphics :

```
1  #include "VidorGraphi
2  #include "Vidor_GFX.h
3
4  Vidor_GFX  vdgfx;
5
6  void setup() {
7
8      Serial.begin(9600);
9
10     // wait for the ser
11
12     // if you are power
13
14     while (!Serial);
15
16     // Initialize the F
17
18     if (!FPGA.begin())
19
20         Serial.println("I
21
22         while (1) {}
23
24     }
25
26     delay(4000);
27 }
28
```
