Nano RP2040 Connect Chromebook Setup

A quick tutorial on how to setup your Nano RP2040 Connect with a Chromebook, using the Cloud Editor & the Arduino Chrome App.

Author · Karl Söderby · Last revision · 07/17/2024

Introduction

[Goals](#)[Hardware & Software Needed](#)[Install Arduino App \(Chrome Store\)](#)[Cloud Editor](#)[Conclusion](#)

Introduction

The [Nano RP2040 Connect](#) is a popular development board packed with features. If you are using a **Chromebook**, setting up your board is a bit different:

It is only possible to use the [Cloud Editor](#), an online IDE that is part of the [Arduino Cloud](#).

Compiled sketches are saved (in `.uf2` format) on the RP2040's mass storage device.

In this tutorial, we will take you through the steps needed to set up your board using a Chromebook

[Help](#)

Note that only the Cloud Editor is supported in Chromebooks. It is not possible to configure and upload to Nano RP2040 Connect boards via the [IoT Cloud](#).

Goals

The goals of this project are:

Learn how to upload sketches to your Nano RP2040 board, using the Cloud Editor.

Hardware & Software Needed

[Arduino Cloud Editor](#).

[Arduino Create for Education](#) (Chrome Web Store)

[Arduino Nano RP2040 Connect](#).

Install Arduino App (Chrome Store)

To program your Arduino via a Chromebook, you will need the [Arduino Create for Education app](#). This is downloaded and installed via the Chrome Web Store.

Install the app.

If you have previously installed the app, make sure your version is up to date.

Cloud Editor

To use the [Cloud Editor](#), you will need to be logged into your Arduino account. If you don't have an account, you will need to register one.

1. Head over to the [Cloud Editor](#).
2. Create a new sketch, and write your program.
3. When you want to upload, connect your board to your computer via USB.

Connect your board to your computer.

4. After connecting, the board's **name** and **port** is visible at the top of the editor (next to upload button). In this case, it is `COM19`.

Board discovered.

5. Click the upload button. This will start the **compilation process**. After some seconds, a popup will appear. Click

the `RPI-RP2` mass storage device. The file is named `sketch.uf2`, which is the binary that will be uploaded to your board.

6. After you have saved, the upload will finish, and you will see this message in the terminal:

Congratulations, you have now uploaded a sketch to your Nano RP2040 Connect using the Cloud Editor on a Chromebook.

Troubleshoot

If things are not working as expected:

- Make sure you have the latest version of the [Arduino Create for Education App](#) installed.

- Make sure your board is connected to your computer properly.

Conclusion

RP2040 Connect board, using the Cloud Editor on a Chromebook. For more tutorials on the Nano RP2040 Connect board, visit the [official documentation](#).
