Getting Started with Arduino Nano

A step-by-step guide to get started with the Arduino Nano.

Author · Hannes Siebeneicher · Last revision · 06/13/2024

To use the [Arduino Nano](#) board, you will need the Arduino AVR Board Package, which comes preinstalled with the IDE.

You will need a version of the Arduino IDE, which you can download from the [Arduino Software page](#). In this guide, we will use the latest version of the IDE 2.

Software & Hardware Needed

[Arduino Nano](#)[Arduino IDE](#)

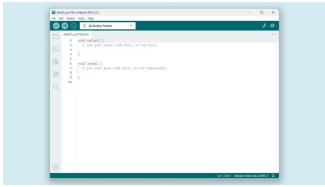

You can also use the [Cloud Editor](#) which comes with all Arduino boards pre-installed.

Download & Install IDE

- 1 First, we need to download the Arduino IDE, which can be done from the [Arduino Software page](#).

[Help](#)

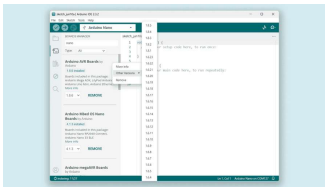

- 3 Open the Arduino IDE.

The Arduino IDE.

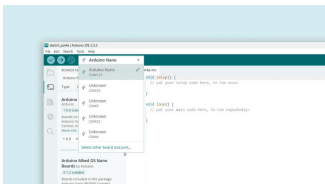

Board Package

The **Arduino Core for AVR devices** comes preinstalled with the IDE, so no additional installation is necessary to get started. To use a different version than the latest, open the "Board Manager" from the left-hand menu. Search for Nano and install the version you want to use.

Arduino AVR Board Package

You should now be able to select your board in the board selector. You will need to have your board connected to your computer via the USB Mini B connector at this point.

Arduino Nano board found.

Congratulations, your board is now ready to be used via the Arduino IDE.

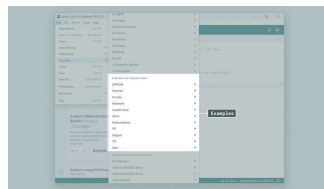

Compile & Upload Sketches

To compile and upload sketches, you can use the:

Checkmark for compiling code.

Right arrow to upload code.

There are several examples available for the Nano board, which can be accessed directly in the IDE, through **File > Examples**. These examples can be used directly without external libraries.

Nano examples.

Summary

In this tutorial we prepared the Arduino Nano to be used with the Arduino IDE.

For any issues regarding the Arduino AVR board package, please refer to the [Arduino Core for AVR devices](#).
